## About Our Farm..

- 55 Acres of Pasture
- 75 Registered Jersey Milking Cows
- 75 Jersey Heifers
- 45 Jersey Steers \& Veal Calves
- Rotational Grazing
- Seasonal Breeding

| Grass |  |
| :---: | :---: |
| Costs of production (\$/cwt ECM) for different systems in over 40 countries |  |
| - Tie Stall Barns | \$28/cwt |
| - Free Stall Barns | \$21/cwt |
| - Dry Lots | \$17/cwt |
| - Grazing | \$12/cwt |

$\qquad$
$\qquad$

Finding the proper balance.

- Stocking density
- Occupation period
- Rest period
"Managed Intensive Grazing is not simply turning cows out to pasture but rather: helping grass grow and guiding the cow to harvest it properly".

## Feeding the Grazing Herd

- Waste no grass - appropriate stocking density.
- Voisin principles
- Stocking density
- Occupation period
- Rest period.
- Supplemental forage and grain is a good thing as long as you are not wasting grass.
- Time budget is critical.
- Sward density and volume are important.
- Grazing is no excuse for low milk production.

Typical Grazing Diet (Spring)

|  | Lbs DM | Lbs ASIS |
| ---: | :---: | :---: |
| Spring Grass | 23 | 110 |
| Corn Silage | 9.5 | 25 |
| $16 \%$ Grain | $\underline{17.5}$ | $\underline{20}$ |
| TOTAL Pounds | 50.0 | 155 |
